PV Geneation: I skipped a month in my reporting - must have been the perfect August that lulled me into complacency. So here is the two-month total: 760 kWhrs of electricity generated, averaging 380 per month. That puts us at a total of 3,687 kWhrs generated in the first 10 months of the year. Keeping in mind that our goal is 4,000+ kWhrs/year, only 313 kWhrs are needed to make that mark. Usually we hit 4,100.

Plugin Prius: This was the first year that I had a summer experience with the vehicle. My overall gas mileage to date is 146 mpg! My current tank of gas shows 382 mpg! So far, I've traveled 2,112.8 miles on that tank.

Recent Fuel-ups

I just filled up (Nov. 12th) and the numbers are impressive, if I do say so myself. I went 2,2628.6 miles on just one tank of gas! Since it was summertime, my range on the EV battery was strong, topping out at 14.1 miles (before the car goes over to the HV mode). I keep track of my fuel mileage on Fuely.com and though they vary from what my Prius readout says, they are in the ballpark. Toyota told me I got 348 mpg, Fuely figures 322 - either one is outstanding!

through the field. The birds are dark in color, possibly black or dark brown. They are standing in a group, some facing the camera and others with their backs to it. The field is green and appears to be a pasture. There is a white fence in the foreground and a wooden fence in the background. The sky is not visible in the photo.
